**DETAILED ACTION**

**RESTRICTION REQUIREMENT**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 30, drawn to solid state image sensor including noise or undesired signal reduction, classified in class 348, subclass 241.
- II. Claim 31, drawn to color correction on an image signal, classified in class 348, subclass 223.1.
- III. Claim 32, drawn to natural color scanning facsimile, classified in class 358, subclass 505.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable for the following reasons:

Invention III has separate utility such as an LED array for irradiating a solid state image pickup apparatus with light and original feeding means for feeding an original document/image which are not required by the inventions of groups I and II.

Invention II has separate utility such as color correction means for performing color correction on a signal output from a solid state image pickup apparatus and control means for controlling the color correction means which are not required by the inventions of groups I and III.

Art Unit: 2615

Invention I has separate utility such as difference means for performing difference processing on a noise component contained in the image signal read by read means, detection means for detecting an image pickup condition and correction means for performing correction of execution of difference processing in accordance with an output from the detection means which are not necessarily required by the invention of groups II and III.

See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

***Conclusion***
